TAMANNA SIROHI

architect, designer | New Delhi

Architect with 7 years of experience spanning infrastructure, commercial and residential design.

At RLDA, I contributed to the masterplanning and architectural documentation of the New Delhi Railway Station redevelopment — one of India's largest urban infrastructure projects at 120 Ha.

I specialise in translating complex design intent into precise technical documentation, coordinating across multidisciplinary consultants from concept through site execution.

FRENCH

KEY STRENGTHS

- Design Development
- Working Drawings & Technical Detailing
- Site Coordination & Execution
- Consultant & Vendor Coordination
- Client Interaction
- Material Selection & Specifications

PROFESSIONAL EXPERIENCE

Monotone Studio

Principal Architect/Partner | Nov '23 – Apr '26

- Developed detailed working drawings for residential, commercial and interior projects.
- Coordinated with structural engineers for column and beam layouts.
- Prepared design presentations and client documentation.
- Supervised site execution and coordinated with vendors and contractors.
- Designed interior elements including flooring, ceilings, furniture and joinery details.
- Assisted in quantity documentation and material specifications.

Rail Land Development Authority (RLDA)

Architect | Aug '21 – Nov '23

- Led architectural documentation and planning coordination for NDRS redevelopment — 120 Ha scheme covering multimodal transit hubs, station building, and urban masterplan.
- Coordinated with multidisciplinary consultants for design review and technical approvals.
- Assisted in preparation and review of tender documents and project reports.
- Contributed to planning studies for Mumbai and Ahmedabad railway station redevelopment.

GPM Architects and Planners

Junior Architect | Jul '19 – May '21

- Assisted in planning and design development for residential housing projects.
- Prepared AutoCAD drawings including layouts, sections and detailing.
- Worked on plot planning and housing society layouts.
- Supported project documentation and consultant coordination.

Redevelopment of New Delhi Railway Station

120 Ha Scheme Area —Overall Site Boundary

Circulation Plan

- Defines proposed internal road network
- Establishes clear vehicular movement and access points
- Enhances connectivity across key zones
- parcel movement demarcation

Construction/Demolition Plan

- Identifies proposed built interventions within the redevelopment area
- Marks buildings designated for demolition to enable new development
- Indicates structures to be renovated and integrated into the proposed scheme
- Highlights structures to be retained as part of the existing framework

	Construction		Renovation
	Demolition		Retention

Existing Structure Plan

- Maps existing built structures and station infrastructure
- Identifies surrounding built fabric and site edges
- Establishes baseline for redevelopment interventions

PACKAGE 1 – DETAILED MASTER PLAN (71.6 HA)

- Identified as the first phase of development within the overall scheme
- Defines the primary redevelopment precinct within the site
- Aligns built form with existing railway infrastructure for continuity and efficiency
- Integrates an MMTH hub to strengthen multimodal connectivity
- Proposes ramps connecting to the flyover for improved accessibility

Overall Master Plan – 120 Ha Scheme Area

- Covers a 120-hectare redevelopment zone structured around the railway corridor
- Integrates transport infrastructure with the surrounding urban fabric
- Defines scheme boundary, key access points, and overall spatial organization
- Establishes land use distribution to improve connectivity and efficiency
- Forms the *base framework for subsequent detailed development packages*

Site Area: 120 Ha
Achieved FAR: 3.55
Ground Coverage: 33.01%

PLAN AT GRADE LEVEL

LEGEND

-  Pedestrian Path
-  Ramps to Elevated Road
-  Green Area

STATION COMPONENTS:

MMTH 02 (AJMERI GATE)

- Multimodal hub with rail, bus, cab, and airport metro connectivity
- Form responds to DMRC corridor below; connected to the railway station via skywalk

LINEAR STATION BUILDING 02

- Enhanced entry spine with lobby, cloakroom, and passenger facilities
- Integrated with station system; offices located on upper floors

EXISTING PLATFORMS

STATION BUILDING

- Primary railway hub integrating arrival, departure, and concourse functions
- Central anchor connecting all multimodal systems across the site

LINEAR STATION BUILDING 01

- Upgraded existing interface with entry, security, and departure functions
- Ground + first floors for transit use, upper levels for offices

MMTH 01 (PAHARGANJ)

- Multimodal Transit Hub integrating rail, bus, and cab systems
- Connected to station building via skywalk at upper level

PLAN AT CONCOURSE LEVEL

LEGEND

- Arrival Plaza
- Existing Platform
- Elevated Road Network
- Arrival Lobby
- Departure Lobby
- Circulation Area
- Skywalk Bridges

- Passengers from Upper Floor
- Departing Passenger Movement
- Passengers from Lower Floor
- Passengers from Drop-Off Area
- Arriving Passengers Movement

Design driven by flow, segregation, and multi-level connectivity.

FORM DEVELOPMENT

- Passenger flow generates overlapping movement loops
- Loops merge to form a continuous infinity geometry

- Geometry splits into two functional zones
- Resulting twin-dome form segregates arrival and departure

ICONIC TWIN-DOME FORM

- Station form derived from infinity geometry, symbolizing continuous passenger flow
- Developed into a twin dome configuration
- Each dome accommodates arrival and departure zones separately

PASSENGER SEGREGATION

- Dedicated arrival and departure lobbies on concourse level
- Movement planned to avoid cross flow between incoming and outgoing paX
- Arrivals directed towards exit corridors and transport links
- Departures guided through controlled entry → waiting → boarding sequence

CIRCULATION PLANNING

- Clear zoning into waiting, movement, and transition areas
- Looped circulation system ensures intuitive navigation

MULTI LEVEL VEHICULAR CIRCULATION STRATEGY

A vertically distributed parking system designed to manage high vehicular inflow within a constrained urban footprint. The scheme optimizes entry-exit segregation and continuous ramp circulation to reduce congestion and improve throughput.

KEY STRATEGIES

- Segregated entry and exit points minimize conflict zones.
- Continuous ramp loop enables seamless vehicular movement across levels.
- Parking distributed across multiple tiers for balanced load management.
- Direct linkage to elevated road improves accessibility and dispersal.

PRIMARY CIRCULATION OPERATES AS A CONTINUOUS LOOP, ELIMINATING DEAD-END MOVEMENT.

PROGRAM INTEGRATION & URBAN INTERFACE

A mixed-use transit hub integrating metro connectivity, parking infrastructure, and office spaces. The vertical zoning strategy separates public, vehicular, and private functions while maintaining seamless pedestrian access.

KEY STRATEGY

- Ground I/L integrates metro concourse, retail, and pedestrian pathways.
- Mid-levels accommodate structured parking with efficient ramp connectivity.
- Upper levels house office spaces positioned away from traffic disturbance.
- Skywalk connection ensures direct pedestrian linkage to station infrastructure.
- No-construction zone informs massing and spatial organization.

RESIDENCE D-419, DEFENCE COLONY | NEW DELHI

2000 sq.ft. 3BHK residence designed for a family of three.

Scope included layout optimisation, interior design, façade development, and end-to-end consultant coordination.

The design emphasises bespoke detailing — custom furniture, concealed lighting, stone-finished bathrooms, and a dedicated yoga space — resulting in a highly tailored living environment.

JOINERY DETAILS

Furniture Details

Custom-designed mandir conceived as a soft curved form, anchors the recreational room while merging with the wardrobes. A wooden jaali back panel introduces texture and visual lightness, complemented by a metallic-painted finish. Integrated lighting and handle details are resolved through precise joinery.

Ceiling & Lighting

Detailed sections highlight the integration of lighting with architectural elements. In the powder washroom, a cornice profile incorporates concealed strip lighting within the moulding, creating a soft ambient glow. The master bedroom ceiling as well, explores a curved geometry at the junctions of wall and ceiling.

Wet Area Details

The washroom is designed as a seamless composition, integrating a vanity above the WC and overhead cabinets. A chamfered edge allows for easy operation through the concealed finish. Vanity drawers further explore the use of concealed handles, ergonomic construction, and maintaining uninterrupted surfaces.

m joinery as a composition, lit niche C with the inetry. d edge andle-less ough a ger grip. er details ore the profile and clearances, a clean, surface.

Floor Plan

Jamming/Door

Detailed sections illustrate the fixing of stone jambs to form a defined outer frame for doors and windows, with aluminum sliding systems mounted over the stone.

Complementary details of camouflaged doors resolve flush integration with interior walls, maintaining a seamless and minimal finish.

01 Living/Dining Area

Anchored by a bespoke sculptural ceiling installation, the living space establishes a bold yet refined atmosphere through layered lighting and curated material contrast.

Dining Area

Living Area

02 Rooms

Each bedroom is conceived as a private sanctuary, with organic furniture forms, arched detailing and a calm, considered material palette throughout.

Master Bedroom

Yoga Room

03 Washrooms

Stone-finished bathrooms with floor-to-ceiling material continuity. The powder washroom features signature CNC-cut wall panels with custom vanity profiling.
